SERVIROUTE

SERVIROUTE is a high-tech, multi-purpose binder sprayer.

SERVIROUTE is the ideal machine to accompany hot mix teams: a complete system for making the hanging layer, water and fuel tanks to fill the machines on site, the possibility of adding lime milk and dope options, and many possible improvements.

In order to better meet the needs of teams on construction sites, we have added the joint making function to the possibilities of our SERVIROUTE.

All junctions are potential weak points, the asphalt may be less well compacted and water is more likely to enter the road, which can lead to its rapid degradation, The construction of a joint with the sealant allows to limit the risks.

The SERVIROUTE SPM, in addition to its usual functions of spreading bitumen emulsion and fueling site includes a melting option consisting of a platform, a putty tank, an indirect heating system, a circulation system and a spreading system of the sealant with a 3-nozzle ramp positioned on an arm or articulated arms implanted in the wheelbase or at the front of the carrier.

The same machine can thus make the hanging layer and the joints.

This new feature strengthens the positioning of SERVIROUTE as an essential machine for asphalt teams, a machine that contributes to decarbonisation through its versatility, by limiting the number of machines needed to complete the jobsite and the numbers of refuelling trips .

About SECMAIR

Secmair, a Fayat Group Company for almost two decades, is the Euopean leader for developing and manufacturing road maintenance machinery since 1981. Featuring the most complete line of road maintenance equipment, from surface dressing to cold mix asphalt, as well as crack bridging and pothole treatment, SECMAIR is positioned to offer a solution for every road maintenance requirement. SECMAIR one single production site constitutes a unique platform to guarantee state-of-theart product industrialization alongside transversal components, ensuring outstanding reliability and first-class after-sales services.
